

FUSED FABRIC STICKING

Ever have trouble with your fused fabric sticking or more importantly NOT sticking? Here are some great tips.

At a PIQF class with Frieda Anderson, she taught three simple tricks:

- 1 The fabric you use must be washed! Unwashed fabric has starches, glazes, and/or insecticide residue that can prevent the fusible from working properly.
- 2 After fusing the fusible to the back of your fabric, let it rest for 10 minutes or so until entirely cool before moving.
- 3 Once you have the design all fused down....place a clean, light-colored solid fabric over the top (right side up) and use a hot steam iron. Gently move from place to place to really secure. Let set without moving for at least a half hour.
