

Annual Drinking Water Quality Report

Goshen Town Water

2024

The Goshen Town water system is pleased to present to you, our customer, with the most current Drinking Water Quality report. This report is designed to inform you about the quality of the water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. If you have any questions about this report or concerning your water utility, please contact Jacob Carlisle at 801-667-9910. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Tuesday monthly at 6 pm located 10 West Main, Goshen City Offices.

The Goshen Town water system provides its consumers with ground water. Our water sources are the Ercanbrack Spring and Goshen Town well.

Corrosion of pipes, plumbing fittings and fixtures may cause lead and copper to enter drinking water. To assess corrosion of lead and copper, The Goshen Town water system conducts tap sampling for lead and copper at selected sites every three (3) years.

The Goshen Town water system has completed an initial lead service line inventory. This inventory includes information on the service line material that connects water mains to buildings/houses. These inventory reports are publicly available and can be accessed at DDW Utah Lead Inventory- [Lead Service Line Inventory](#). Also visit www.goshenutah.gov and click on the Water Department tab to access this data as well.

The Drinking Water Source Protection Plan for The Goshen Town water system is available for your review. It contains information about source protection zones, potential contamination sources and management strategies to protect our drinking water. Our sources have been determined to have a low level of susceptibility from potential contamination sources. Our sources are in remote and protected areas and have a low level of susceptibility to potential contamination sources. We have also developed management strategies to further protect our sources from contamination. Please contact us if you have questions or concerns about our source protection plan.

There are many connections to our water distribution system. When connections are properly installed and maintained, the concerns are very minimal. However, unapproved and improper piping changes or connections can adversely affect not only the availability, but also the quality of the water. A cross connection may let polluted water or even chemicals mingle into the water supply system when not properly protected. This not only compromises the water quality but can also affect your health. So, what can you do? Do not make or allow improper connections at your homes. Even that unprotected garden hose lying in the puddle next to the driveway is a cross connection. The unprotected lawn sprinkler system after you have fertilized or sprayed is also a

cross connection. When the cross connection is allowed to exist at your home, it will affect you and your family first. If you'd like to learn more about helping to protect the quality of our water, call us for further information about ways you can help.

The Goshen Town water system routinely monitors contaminants in our drinking water in accordance with the Federal and Utah State laws. The following table shows the results of our monitoring for 2024. It is important to remember that all water sources of drinking water contain some naturally occurring contaminants. At low levels, these substances are generally not harmful in our drinking water. Removing all contaminants would be extremely expensive, and in most cases, would not provide increased protection of public health.

In the following table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Non-Detects (ND) - laboratory analysis indicates that the constituent is not present.

ND/Low - High - For water systems that have multiple sources of water, the Utah Division of Drinking Water has given water systems the option of listing the test results of the constituents in one table, instead of multiple tables. To accomplish this, the lowest and highest values detected in the multiple sources are recorded in the same space in the report table.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter (ug/l) - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Parts per trillion (ppt) or Nanograms per liter (nanograms/l) - one part per trillion corresponds to one minute in 2,000,000 years, or a single penny in \$10,000,000,000.

Parts per quadrillion (ppq) or Picograms per liter (picograms/l) - one part per quadrillion corresponds to one minute in 2,000,000,000 years or one penny in \$10,000,000,000,000.

Picocuries per liter (pCi/L) - picocuries per liter is a measure of the radioactivity in water.

Millirems per year (mrem/yr) - measure of radiation absorbed by the body.

Million Fibers per Liter (MFL) - million fibers per liter is a measure of the presence of asbestos fibers that are longer than 10 micrometers.

Nephelometric Turbidity Unit (NTU) - nephelometric turbidity unit is a measure of the clarity of water. Turbidity in excess of 5 NTU is just noticeable to the average person.

Action Level (AL) - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Treatment Technique (TT) - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

Maximum Contaminant Level (MCL) - The “Maximum Allowed” (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The “Goal” (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Date- Because of required sampling time frames i.e. yearly, 3 years, 4 years and 6 years, sampling dates may seem outdated.

Waivers (W)- Because some chemicals are not used or stored in areas around drinking water sources, some water systems have been given waivers that exempt them from having to take certain chemical samples, these waivers are also tied to Drinking Water Source Protection Plans.

TEST RESULTS

Contaminant	Violation Y/N	Level Detected ND/Low-High	Unit Measurement	MCLG	MCL	Date Sampled	Likely Source of Contamination
Microbiological Contaminants							
Total Coliform Bacteria	N	ND	N/A	0	Presence of coliform bacteria in 5% of monthly samples	2024	Naturally present in the environment
Fecal coliform and <i>E.coli</i>	N	ND	N/A	0	If a routine sample and repeat sample are total coliform positive, and one is also fecal coliform or <i>E. coli</i> positive	2024	Human and animal fecal waste
Turbidity for Ground Water	N	1.31	NTU	N/A	5	2022	Soil runoff
Inorganic Contaminants							
Arsenic	N	4-6	ppb	0	10	2022	Erosion of natural deposits; runoff from orchards; runoff from glass and electronics production wastes
Barium	N	29-116	ppb	2000	2000	2022	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
Copper a. 90% results b. # of sites that exceed the AL	N	a.0.27 b.0	ppm	1.3	AL=1.3	2022	Corrosion of household plumbing systems; erosion of natural deposits
Cyanide	N	ND-5	ppb	200	200	2022	Discharge from steel/metal factories; discharge from plastic and fertilizer factories
Fluoride	N	179-260	ppb	4000	4000	2022	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
Lead a. 90% results b. # of sites that exceed the AL	N	a. 3 b.0	ppb	0	AL=15	2022	Corrosion of household plumbing systems, erosion of natural deposits
Nitrate (as Nitrogen)	N	ND-1	ppm	10	10	2024	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
Selenium	N	ND-5	ppb	50	50	2022	Discharge from petroleum and metal refineries; erosion of natural deposits; discharge from mines
Sodium	N	99-177	ppm	None set by EPA	None set by EPA	2022	Erosion of natural deposits; discharge from refineries and factories; runoff from landfills.

Sulfate	N	93-121	ppm	1000	1000	2022	Erosion of natural deposits; discharge from refineries and factories; runoff from landfills, runoff from cropland
TDS (Total Dissolved solids)	N	796-916	ppm	2000	2000	2022	Erosion of natural deposits
Disinfection By-products							
TTHM Total trihalomethanes	N	4	ppb	0	80	2024	By-product of drinking water disinfection
Radioactive Contaminants							
Alpha emitters	N	0.7-15	pCi/l	0	15	2022	Erosion of natural deposits
Combined Radium	N	0.73	pCi/l	0	5	2022	Erosion of natural deposits
Radium 226	N	0.05	pCi/l	0	5	2022	Erosion of natural deposits
Radium 228	N	0.68	pCi/l	0	5	2022	Erosion of natural deposits

Why are there contaminants in my drinking water?

Drinking water, including bottled water, may reasonably be expected to contain at least a small amount of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and the potential health effects can be obtained by calling the Environmental protection Agency's (EPA) Safe Drinking Water Hotline at (800-426-4791). The sources of drinking water (both tap and bottled water) include rivers, lakes, streams, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity: microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban stormwater runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agricultural, urban stormwater runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems; and radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

If present, lead can cause serious health problems, especially for pregnant women and young children. The Goshen Town water system conducted ten (10) lead samples during 2022. Sampling results can be obtained by calling Jacob Carlisle at 801-667-9910.

The Goshen Town water system is responsible for providing high quality drinking water but

cannot control the variety of materials used in plumbing components. Lead in drinking water is primarily from material and components associated with service lines and home plumbing. You share the responsibility for protecting yourself and your family from the lead in your home plumbing. You can take responsibility by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. If your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. You can also use a filter certified by an American National Standards Institute accredited certifier to reduce lead in drinking water. Lead in drinking water is rarely the sole cause of lead poisoning, but it can add to a person's total lead exposure. All potential sources of lead in the household should be identified and removed, replaced or reduced. If you are concerned about lead in your water, you may wish to have your water tested. Please contact Goshen Town Water at Jacob Carlisle at 801-667-9910. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available at <http://www.epa.gov/safewater/lead>.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised people such as people with cancer undergoing chemotherapy, people who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice from their health care providers about drinking water. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

We at The Goshen Town water system work around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

CCR Certification Form

CWS Name: Goshen Town _____

PWSID No: UTAH25013 _____

The community water system named above hereby confirms that its consumer confidence report has been distributed to customers (and appropriate notices of availability have been given). Further, the system certifies that the information contained in the report is correct and consistent with the compliance monitoring data previously submitted to the state/primacy agency.

Certified by:

Name: Wake Carlisle _____

Title: Public Works Supervisor - Water operator _____

Phone #: 801-10107-9910 _____ Date: 4/18/25 _____

Please check all items that apply.

CCR was distributed by mail.

Date completed: _____

CCR was distributed by other direct delivery method. Specify direct delivery methods:

Date completed: April 1, 2025 _____

Mail – notification that CCR is available on Web site via a direct uniform resource locator (URL)

E-mail – direct URL to CCR

E-mail – CCR sent as an attachment to the e-mail

E-mail – CCR sent embedded in the e-mail

Other: Town Newsletter _____

If the CCR was provided by a direct URL, please provide the direct URL Internet address:

www goshenutah.com/water-department.htm _____

If the CCR was provided electronically, please describe how a customer requests paper CCR delivery:

They can download and print, come in to the office and get a pre-printed CCR. _____

- "Good faith" efforts were used to reach non-bill paying consumers. Those efforts included the following methods as recommended by the state/primacy agency:

Date completed: March 30, 2025

- posting the CCR on the Internet at www.goshenutah.gov
- mailing the CCR to postal patrons within the service area (attach a list of zip codes used)
- advertising availability of the CCR in news media (attach copy of announcement)
- publication of CCR in local newspaper (attach copy of newspaper announcement)
- posting the CCR in public places (attach a list of locations)
- delivery of multiple copies to single bill addresses serving several persons such as: apartments, businesses, and large private employers
- delivery to community organizations (attach a list)
- electronic city newsletter or electronic community newsletter or listserv (attach a copy of the article or notice)
- (for systems serving at least 100,000 persons) Posted CCR on a publicly accessible Internet site at the address: www.

Date completed: _____

- Delivered CCR to other agencies as required by the state/primacy agency (attach a list)

Date completed: _____

Local Postings for 2024 CCR- Goshen Town UTAH25013

-Town Office – 10 West main Street Goshen, UT 84633

Goshen Town Newsletter

March
2025

Town Council Meeting will be

Tuesday March 11th 2025 @ 7PM

Planning & Zoning

Tuesday March 18th @ 7pm (If needed)

- **Reminder of the water rate increase of 2% beginning on your utility bill****
- Reference ordinance #09-01-2021**
- *Trash will increase in April each year per Waste Management***

Goshen's annual 2024 water CCR is available at the town office or online at www.goshenutah.gov (Consumer confidence report)

GOSHEN VALLEY PANTRY

THE FOOD PANTRY IS OPEN ON THURSDAY EVENINGS FROM 5:30PM-6:30PM AT THE GOSHEN CITY BUILDING. THERE ARE NO REQUIREMENTS TO PARTICIPATE.

YOU CAN MAKE DONATIONS DURING TOWN BUSINESS HOURS, OR THAT NIGHT.

THANKS TO SO MANY PEOPLE WHO HAVE DONATED SO MUCH TO HELP OTHERS!! YOU ARE SO APPRECIATED! WE CAN ALWAYS USE CANNED MEATS, TOILETRIES, JAMS, CANNED CHILI, DRY BEANS, AND CLEANING SUPPLIES, OR WHATEVER YOU FEEL NECESSARY.

THANK YOU!

Easter Egg Hunt

April 19th @ 9:00am (sharp)

Goshen Elementary

****Currently looking for sponsors and donations****

contact the office if you would like to, or drop by during regular hours!

FOOD BANK

Wednesday March 26th, 2025

Truck will arrive approx 9:00 a.m. you will line up south to north on Center Street with pickup in front of the Seniors' Center

WINTER DUMP HOURS

Friday 1pm-4pm

Saturday 9am-4pm

(Lunch 12:30-1:30)

(You may use your dump pass for couches, mattresses etc)

COVER ALL LOADS TO THE DUMP!

WE DO NOT WANT OUR STREETS FULL OF DEBRIS!!!

DUMP PASSES WILL BE REQUIRED FOR PROOF OF RESIDENCY!

WE NO LONGER ACCEPT USED OIL until further notice!

NO MORE CONSTRUCTION MATERIALS AT DUMP

ACH payment option is now available; email or call the office. Email: goshentown@gmail.com

****Find us on Facebook! (Town of Goshen Utah)**
