

When buying designs, be sure that the design was created in .art format NOT translated to .art format.

Why we like the .art format for embroidery and conversion to other formats.

1. The .art format is a native file format that allows the best translation of a design.
2. Stitch data files loose information is other formats when they are re-sized.
3. Fancy fills will translate into basic tijami fill and loose their beauty.
4. If you re-size in the .art format first and then save in any other format you will have a perfect translation.
