

## **EMBROIDERY: GETTING STARTED**

This class will cover the basics of needles, threads and stabilizers for embroidery. You will be bringing your lap top computer to class to use as we practice getting designs ready to embroider.

### **SUPPLY LIST**

LAPTOP- You will need to bring your laptop computer to class

I would prefer that you have already loaded Bernina software (if you have purchased this) OR that you have downloaded ART Link v6 from [www.bernina.com](http://www.bernina.com)

If you do not know how to do this, please contact us BEFORE class so that this can be completed. If you do not have a computer, you will still need to attend the class because we will be learning how to get your designs into a format that your machine can read.

In ART Link v6 there is a help manual that you may wish to print out as we will be going over use of this briefly in class and it's helpful to have that available for reference and/or note taking.

COMPUTER MOUSE- You should have a mouse that is connected, not a wireless. The touch pad can be used but most people find a mouse more convenient.

USB STICK- You will also need a USB that is not large (2GB or smaller)

We sell two options:

(1) Bernina stick which is guaranteed to work in your machine and designs can be recovered if stick malfunctions.

(2) Becky's Fabrics stick from OESD works in your machine, but does not have the "insurance policy". I prefer to use it just for storage

The generic ones purchased at mass merchants are not guaranteed to work for design transfer and can malfunction with no back-up.

After covering the computer info we will deal with needles, threads and stabilizers so that you will be ready for Embroidery 1.
