# STORM DRAIN DECAL PROGRAM COMMUNITY SERVICE PROJECT

## PURPOSE

Storm drain decals and brochures have become a popular method of teaching the public about the effects and prohibitions against waste disposal in the storm drain system. The decals are glued to the side of the drain inlet and the brochures are distributed door-to-door with a message that informs the public that water that enters the storm drain system is not treated prior to discharge into local waters. The brochures also offer tips on how to prevent storm water pollution.

## INSTRUCTIONS

**This project requires adult supervision to ensure (1) the safety of youths working in the roadway and (2) the proper use and safe handling of the adhesive, which is harmful if not properly handled.**

1. Obtain a street map of the area and receive the decals from the Brigham City Waste Water Department at 1175 W. 675 N. This map shows the location of each storm drain inlet box. Any area not completed may be chosen for the decal program.
2. Use the map as a guide to help you find each inlet box. If the map shows incorrect information about the location of inlet boxes, please indicate the new information on the map or a separate sheet of paper. Use the street address as the locator.
3. Materials provided by Brigham City at no charge:
  - a. Decals
  - b. Brochures and a box of rubber bands
  - c. Glue
  - d. Caulking Guns
  - e. Wire Brushes
  - f. Gloves
  - g. Map

**NOTE:** Upon completion of the project, please return any items not used as well as the caulking guns and the wire brushes.

4. Once at your location, clean the existing grate so it is free from debris. Apply the decals according to the instruction sheet and distribute the brochures door-to-door to neighboring houses. Once all decals have been applied and brochures have been distributed, any unused supplies and the updated map will be returned to Layton City Engineering.
5. Final inspection by Brigham City will take place after completion.
