WATER CONSERVATION TIPS

- Visually inspect your sprinkler system once a month during daylight hours. Check and fix any tilted, clogged or broken heads. Although watering at night is recommended, you won't notice problems with your system unless you see it in operation.
- Water your landscape in cycles by reducing the number of minutes on your timer and using multiple start times spaced one hour apart. This allows the water to soak into the soil and avoids runoff.
- Water your lawn only when it needs it. If you leave footprints on the grass, it is usually time to water.
