

SPANISH FORK/SANTAQUIN PIPELINE SALEM-REACH 2

PROJECT INFORMATION

The Central Utah Water Conservancy District is installing the Salem-Reach 2 segment of the Spanish Fork/Santaquin Pipeline. This is a 60-inch welded steel pipe that will be buried below a portion of the Salem Canal Road. The alignment for the pipeline follows the Salem Canal Road beginning at Elkridge Drive, extending westward to Goosenest Drive and then crossing Rocky Ridge (see map).

After the new 60-inch pipe has been installed and tested, new asphalt will be installed to replace that portion of the roadway that was excavated. The undisturbed portion of the roadway will then receive a new layer of asphalt creating an entirely new roadway surface for all traffic.

This project includes installation of a new 40-inch HDPE pipe to be placed into the Salem Canal and then enclosed (covered). This pipe will carry the irrigation water for future deliveries beginning in 2020.

ROAD CLOSURE

As a result of the construction work, traffic along the Salem Canal Road will be closed to all but local traffic beginning September 30th, 2019. Expect to encounter delays and one-way traffic within the work zone.
