

Brian Head, UT  
2019 Chipping Project

Brian Head Town in conjunction with Utah Division of Forestry, Fire and State Lands has for the past several years done chipping projects in the Town of Brian Head. We are planning on continuing this project for the fall of 2019.

These projects are a huge benefit to our community in reducing fuel loading that has built up on our private properties for decades. Property owners can participate in this project but must follow the following guidelines when creating piles that will be chipped by our crews.

Guidelines:

- Start piling your limbs ASAP
- Last day for any piling will be Monday September 23, 2019
- Property owners wanting to participate in the Chipping Project will need to contact Brian Head Town Hall and advise them of the location of your property
- This project is open to any property owner in any subdivision that is located in the Town of Brian Head
- Materials to be chipped are only trees and branches, no brown pine needles, stumps or construction material
- Maximum diameter of trees/branches will be 4 inches
- Avoid piling old rotten limbs and small branches, focus more on green material
- Any wood that is good enough to be used for firewood can be piled near the chip pile for others to use
- No piles are to be located on a roadway or in the barrow pit of any road, keep the piles on your own property
- Specific guidelines for how to pile the materials can be found on the Brian Head Town Web page or from staff at the Brian Head Town Office
- Some chipping has already started to take place so the sooner you act and clean your land, the better your chances of having your piled chipped this fall
- For any further information please contact Brian Head Town and the Public Safety Department
