

## SR-248 Paving Project

SR-248; US-40 to SR-32

Crews are planning to place a chip seal coat as the top protectant layer of the roadway section along SR-248 from US-40 to SR-32 this summer. Construction is expected to begin after the Memorial Day holiday and will be complete prior to July 4th. This work is intended to assist in draining the roadway surface.

### WHAT TO EXPECT

- Construction is expected to take approximately 1 month.
- One lane of traffic in each direction will be open through most of the corridor. One-way flagging operations will be in place while crews conduct paving operations through the narrow sections.
- Once we have a detailed construction schedule, we will update you with more specific information.
