PRODUCT INFORMATION SHEET VERTICAL POWER SYSTEM (VPM-T-G2)

VPM-T-G2

- The 23-gallon water tank (15% larger than previous models) and Power Pac allow the Vertical Power System complete mobility and can re-hydrate up to 6 people simultaneously with the fluid of your choice (water, commercial sports drinks or proprietary liquids).
- **When dispensing ANYTHING other than drinking water, please follow the *Other Liquids Cleaning Instructions*, as outlined in the Maintenance Guidelines, to ensure your warranty remains valid.**
- The coiled nozzle hoses keep the drinking nozzles off the ground and Waterboy Sports' patented Safety Spouts prevent the nozzles from coming into contact with the drinker's mouth, reducing contamination possibilities.
- To further reduce bacterial transfer between users, ALL Safety Spouts are treated with an anti-microbial solution.
- Our All-Drain™ sump assists in more complete emptying of the water tank for cleaning and storage.
- Like all Waterboy Sports Pressure-fed Hydration Systems, this model requires no cups, thereby eliminating clean up time and saving landfill space.
- Flat-free tires eliminate tire pressure monitoring.
- The removable and interchangeable Power Pack houses the drinking-water certified pump and 12v rechargeable battery. The external charging port allows quick connection to the Battery Tender® charger. Battery Tender® chargers were selected for their Full Charge Sensor, which stops active charging when the battery is fully charged, to eliminate the risk of over-charging and fire.

Popular accessories:

1. Multi-Bank Chargers, for programs with multiple Power Models. These are available in 4-, 5- and 10-bank configurations and eliminate the mess of individual power cords and monopolizing the outlets in the charging area.

2. Accessory Shelf. For your supplies bag, water bottles, towels, whatever.

3. Ice Chute (a MUST HAVE when the Accessory Shelf is installed). Ask about bundle pricing when you get both.

4. Field Maintenance Kit. Contains easy-fix parts specifically for the VPM-T-G2, including Collars and O-Rings, manifolds, nozzles and Steramine Sanitizing tablets for routine cleaning.
