RFID knowledge:

All of today's Passports and most Debit and Credit Cards use RFID (Radio Frequency Identification) technology.

- ☐ Radio Frequency Identification (RFID) is a type of passive wireless technology that allows for tracking or matching of an item or individual.
- ☐ The system has two basic parts: tags and readers. The reader gives off radio waves and gets signals back from the RFID tag, while the tag uses radio waves to communicate its identity and other information.

How RFID works

Security Training videos • ilcTravelOutfitters.com

Version 4.22

RFID Passport emblem

How to get through airports:

- ☐ RFID Protected wallet
- ☐ RFID Protected Personal Day Bag
- ☐ RFID Protected cover protectors
- ☐ Filtered water bottle to fill after security checkpoint
- ☐ Personal Comfort items for flight
- ☐ Prescription meds in original bottles with description.
- ☐ Liquids, gels and creams no larger than 100 ml or 3.4 ounces

Personal Day Bag:

Shoulder bag, Business case or backpack with Pickpocket protection:

Options to use for protection...

1. Security designed personal bag with locking zippers and slit proof shoulder straps
2. Cross body bag design and wear right shoulder to left side is best position for security.
3. Backpacks are best with same security features above BUT camera / phone, cash and credit cards need another safe place with security in mind.

Key items inside your bag to remember and protect...

- ☐ Water bottle with filtration
- ☐ Camera / Phone easy access
- ☐ Cash and Credit Card for **daily use**
