

decofoil™

A fun and creative way to add a foil finish to any project!

decofoil™ Hot Melt Adhesive is a heat-activated adhesive that is perfect for wearables, cards, and so much more! Can be applied with an iron or most laminators. Simply cut out your desired shape, apply heat and foil!

1. Create hot melt design using a punch, die cut, or an electronic cutting machine. Place design onto fabric with adhesive (rough side) face down.

2. Turn on iron, select silk/wool setting and allow to warm up. When ready, cover design with parchment paper and place and hold iron for 30 seconds.

3. Remove parchment paper and allow to cool. Peel off liner to expose adhesive design.

4. Cut a piece of foil slightly larger than design. Place foil, color side facing up, on top of the adhesive design and cover with parchment paper. Slowly iron with pressure on project for an additional 30 seconds.

5. Remove parchment paper and allow to cool. Peel foil transfer sheet away from adhesive design.
