

Creative Sewing Machines' Workbook based on BERNINA Embroidery Software 7

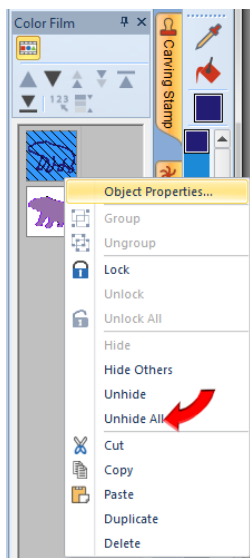

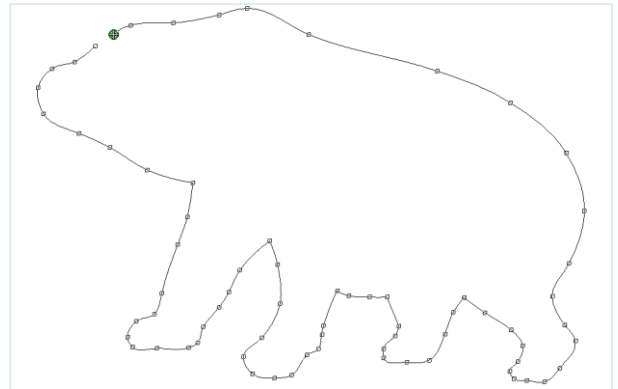

Digitizing with the PunchWork is like digitizing with the Closed Object tool. You just right and left click around the shape. Click around the outside perimeter of the bear shape.

Press Enter to close the outline.

Press Enter again to add Entry Point.

The **PunchWork** is automatically digitized with an outline for placement and then the path for the PunchWork tool to attach the fiber layer.

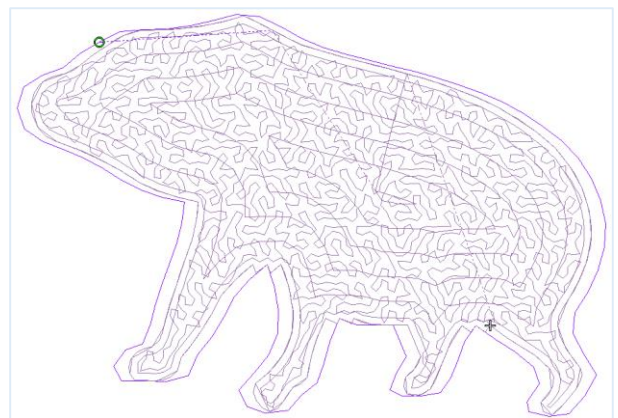

Go to **Color Film** and right click on the highlighted color box (which is hidden right now).

Click **Unhide All**.

One more step:

Click the PunchWork part of the design in the Color Film Box. Click **Move to Start** on the Color Film options.

Save.

Your design is ready to be sent to the machine for stitch out.
