

**Notice of Lindon City Sewer Charge Calculation Change
Effective September 1, 2014**

Your monthly sewer usage charge calculation could be changing.

If you have pressurized irrigation your sewer usage will now be calculated based on actual monthly water consumption.

If you **do not** have pressurized irrigation your sewer usage calculation will not change. It will continue to be based on your winter water usage average as it has been in the past. Your winter water usage average is calculated on readings taken from November-March. Your winter average will then be used as the basis for calculating your monthly sewer usage charges for the next year.

The current sewer rates effective July 1, 2020

Base Rate	\$21.03
Usage per 1,000 gallons	\$ 2.78
