

Highlighted strips below refer to the pieces needed to make the Raven/Manatee border strips that are on the sides, top and bottom sewn next to the center panel section.

The 2nd pg shows the construction process of the DM borders. The Raven/Manatee border strips are attached to each unit before sewing to the center section. Sew the sides on first. Sew the top and bottom DM borders as shown. You will need to make the 4 large corner squares and sew them to the completed top and bottom DM borders before sewing to the top and bottom of your center section.

On pages 3 & 4 I have made corrections to the instructions along with additional instructions.

I designed this pattern in Electric Quilt version 8. All measurements come directly from that program. I tried to be as accurate as possible which is why I chose to use templates for the DM borders rather than standard cutting procedures as I felt it would produce more accurate pieces.

From ¼ yd. 45" wide fabric. Cut Strips WOF

If your fabric is under 45" wide, you will need to cut an extra 2" x WOF strip from the Manatee In order to make the strips long enough for the side borders. I show an extra strip in the cutting chart shown.

This is the top DM (Delectable Mountain) Border. It consists of the DM Border AND the raven & Manatee strips attached to make up this section of the border.

This is the Bottom DM (Delectable Mountain) Border. It consists of the DM Border AND the raven & Manatee strips attached to make up this section of the border.

The larger corners squares get sewn to each end of a border section as shown which makes up the completed top and bottom DM border. Make 2. This is the top border. Flip it and sew to the bottom of the center section for the bottom border.

Delectable Mountain Long Side Borders: Cut each template along the dotted lines. Making sure your fabric strips are wrong sides together, place the templates on the specified fabric matching the width of the template to the width of the strip. Use a rotary cutter and small ruler to cut along the edge of the templates. Each template will produce a right side cut and a reversed cut. It is easier to keep track of the pieces by using masking tape to label each piece as shown in the chart below. For example: Template “A” will produce two pieces; an “A” piece and an “A-r” piece.
