# Silhouette Cameo - How to Number a Pattern
by Pearl P. Pereira
Copyright 2016

Silhouette software has the ability to utilize any font that is installed on your computer. You do not need to install these fonts into the program. The software will simply access all installed font files and display them for you as you go to create your desired text.

1. Open the document you wish to number.

2. Click the Text button.

3. Click the font type.

4. Click the change the font size. 12 pt is what I use.

5. Position the cursor in the area you wish to place the text and type in numbers or text.

6. Put the pen in the holder and select the text and send to Silhouette.
