SVEIN RASMUSSEN

Windsurfing is a life's journey, a way to explore the world, experience cultures and set oneself milestone targets. It's also a way to learn to compete in fairness and with respect to others. Above all, it's such an amazing feeling to hold the wind in one's arms and today with foiling we can fly on top of it all in a way that will attract so many more people to our sport. We at Starboard have given our best to develop a set of Junior gear that will make you look forward to every new session. We also wanted to keep the cost down, so you can use the same board and foil when you go from Junior to the Youth class. Junior windsurfing is a personal thing for our us, I remember my first European Windsurfing Championships at Lake Garda where I was for sure the happiest kid in the fleet.

Now with 40 years of experience, having the opportunity to develop Junior gear with our team is super exciting. Besides getting you into windsurfing, we invite you to become a "future fighter" and join our efforts in doing our bit for the planet. Perhaps you can join our Ocean ambassador program as well? The Ocean is providing us most of the oxygen we need to breathe, so whatever you do, just remember that every little effort to protect our playground counts.

TIESDA
YOU

REMI VILA

The iQFoil 95 & 85 are just amazing, with one board, one foil, two fuselages, one rig & one fin, you cover 5 to 35 knots - no matter the sea conditions - you will race!

Remi Vila
iQFoil development team

The Race foil that started it all.

It started with weekend windsurfers. Then came Formula racers, PWA racers and the Olympic community.

From this opportunity was born the iQFoil vision: to inspire windsurfers of all levels - weekend racers, professionals and Olympians alike - to race together at a wide range of exciting events, on fair, simple and affordable foiling equipment of the highest performance. Race with your friends every weekend or go for gold every quadrennial. There's never been such a uniting opportunity in windsurfing and that's the most exciting part about the iQFoil project.

Tiesda You,
Founder, Starboard Foils

We have stopped using virgin plastic packaging on our boards, but the board's styrofoam, paint, epoxy and EVA come from fossil fuel/oil.

With the help of Starboard's internal plastic tax, we fund the Plastic Offset Program (POP).

After calculating the plastic footprint of the iQFoil, it was settled that the Starboard Plastic Offset Program will collect 2.4 kg of plastic trash for each iQFoil board sold. Our target this year is to collect a total of 50,000 kg from beaches around our test center in Thailand. We will keep on picking plastic trash until regulations are in place to stop the destruction of our oceans.

HEYERDAHL
CLIMATE PARKS

We want to share that the climate crises partially come from deforestation. We need to regenerate forests for the challenging years ahead. Sea trees or mangroves are important players as they absorb more CO2 than any other sources while also helping clean the ocean, and sheltering coastal villages from heavy storms.

We are a partnering in replanting one billion mangrove trees over the next 10 years. The pilot project in the Thor Heyerdahl Climate Park with six million trees is already finished.

Calculating the total carbon footprint of an iQFoil based on production and raw materials, we found that it creates 0.1 ton of CO2.

For each Olympic Starboard iQFoil we will plant 10 trees, absorbing 10 tons CO2 over 20 years, making the iQFoil board 100 x climate net positive.

Every tree counts and with your help we can inspire others to follow suit.

STARBOARD iQFOIL 85

The streamlined pathway from Junior to Youth and Olympic Gold

iQFoil Junior: the sailing platform that offers young sailors the most affordable path from Junior to Olympic gold. In the highest and most exciting performance package.

How does Starboard achieve this?

The streamlined transition between age groups makes this exceptional performance-to-affordability ratio possible. Changing age groups normally means changing all your equipment. We propose the iQFoil Junior class where transitioning to iQFoil Youth class would require only the front wing of the foil and the rig to change for a larger size. Core elements like the board and foil components remain the same.

What is the objective?

The objective is to increase participation and optimize retention:

"Innovating the growth of quality windsurfing. Starboard is all about developing aspirational programs from grass roots to champions. We recommend one amazing board, transitioning riders from Junior to Youth racing on all courses, minimizing cost and complication while increasing participation." Svein Rasmussen, Starboard founder and Group CEO.

What allows iQFoil Junior equipment to achieve high-performance at such a price?

The board - by adopting the best of the Olympic Windsurfing's iQFoil development program, the iQFoil 85 board takes-off in even lighter winds than its larger sibling with better control and more comfort for lighter riders. It is built for light weight and strength by combining a full carbon bottom, a thick, durable skin and strategically placed fibre reinforcements.

The foil - the mast is an ultra-stiff 95cm aluminium mast paired with an 800 cm² front wing ensuring control for lighter riders. Both the 95 Plus and 115 Plus fuselages are included in the full package giving exciting racing format options and the widest wind range. The foil's adjustable tail wing angle is what allows the foil to take off in such light winds and cover such a wide wind range at little added cost. It's a must.

Only the front wing needs to be upgraded to 900cm² for going to Youth.

The fin - the short 56cm fin suits the narrow tail. It is better for launching in shore break and performs well on all angles.

The lightweight FGO 5m², 6m² and 7m² sails with strong reinforcements in vital areas, cover a wide weight range, wind range and comes from Severne Sails' world-leading development program. They offer huge trimming range, excellent cam rotation and reinforcements in vital stress areas.

The lightweight RDM Blue mast has a 90% carbon content for extra durability and optimum reflex. The boom is a V grip design aluminium monocoque design - perfect for smaller hands. 40% stiffer than a traditional round aluminium boom and with unmatched durability.

Who has participated in tests so far?

Testing of the iQFoil Junior package included the Thai National Junior team (55 to 65 kg), World Champions Remi Vila (92kg) and Gonzalo Costa Hoewel (88kg), Starboard designers Svein Rasmussen (69kg), Tiesda You (65kg) and Ex Thanupong (55kg). This wide panel was to secure the validation of different sized riders.

What are the environmental initiatives associated with the iQFoil Junior program?

Each board is made 100x Climate net positive through the Mangroves planted in Thor Heyerdahl Climate Park. Our own Starboard Plastic Offset Program picks up 1.4 kg of ocean plastic per board sold. Strict environmental event guidelines and support will sit alongside World Sailing's sustainability program.

Events and clinics are already planned for this summer, stay tuned.

"It's all about guiding the next generation to take off and fly beyond our own imagination."

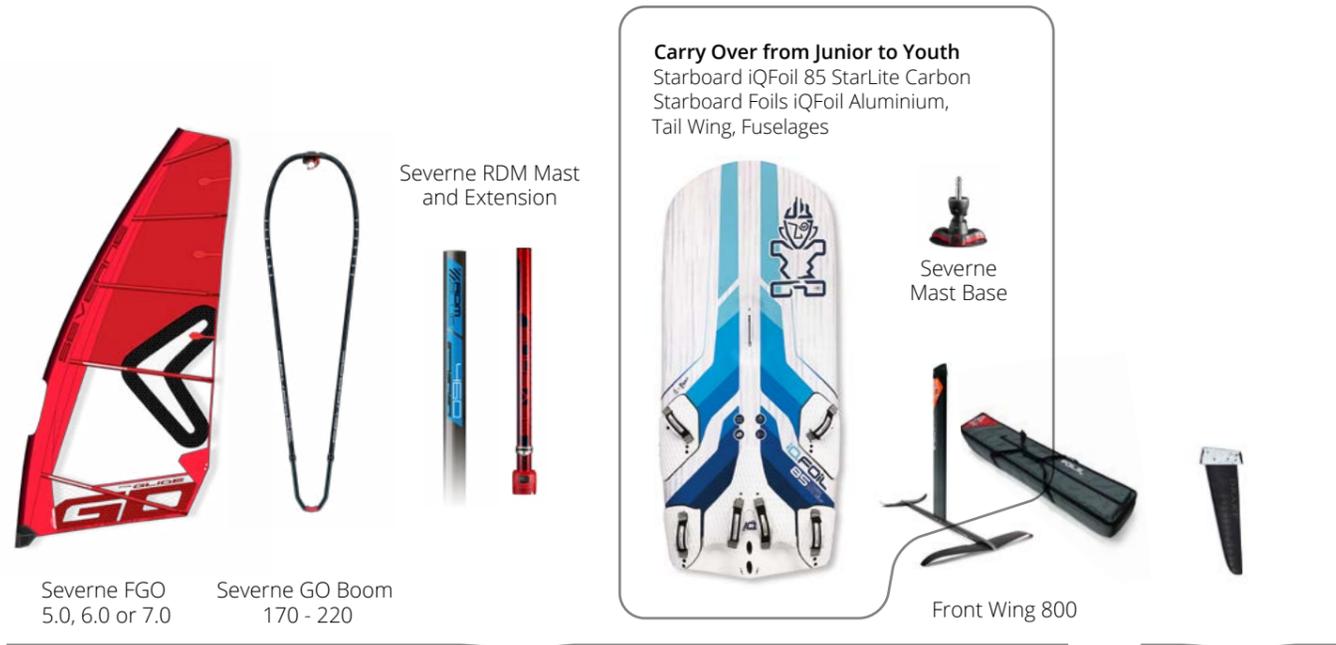

JUNIOR PACKAGE

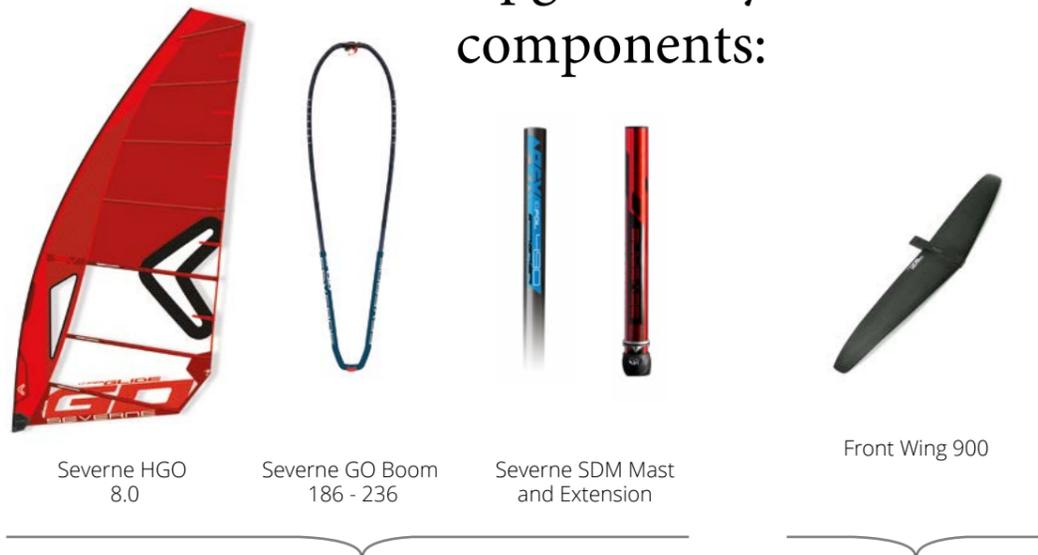

Starboard iQFoil 85 StarLite Carbon
Starboard Foils iQFoil Aluminium
Mast: 95cm Aluminium V5
Front wing: 800, Tail Wing: 255 -2°
Fuselages: 95 Plus and 115 Plus
Drake Race 56 Ready to Race
Severne FGO Sail 5.0, 6.0 or 7.0
Severne RDM Blue Mast 430 or 460
Severne GO Boom 170 - 220
Severne RDM Triple Extension
Severne Mast Base

Zero 2 Hero option
Offer available for school and clubs:
Starboard iQFoil 85 StarLite Carbon
TT middle box and removable center fin.
Ideal for teaching the basics of windsurfing foiling and iQFoil Junior/ Youth Racing, all on one board.
(Additional fin box weighs 400g)

Junior Package

Upgrade to youth with these components:

FIRST IMPRESSIONS OF SOME RIDERS AND COACHES

“

I am a windsurfer, kitesurfer and surfer. The last 5 years I have been foiling in all kinds of conditions using different types of equipment including wing foiling. I had the privilege to test the iQFoil 85 Junior/Youth board for the first time. We had around 10knots of wind and my first reaction once I was up on the foil was, "Wow, this is super stable and easy!" I really enjoyed the test session and I was also impressed to see how forgiving and easy it was to maneuver the board.

- KORAY EZER-
 Head of Performance at Oman Sail,
 Former National Windsurf coach.

“

Fast learning process. Great fun! I can teach foiling to much younger windsurfers with this equipment. Light equipment and stable rides makes rider feel safe.

- MUKHTAR AL MUJAINI -
 Techno 293 Junior Team Coach

“

One of my first foiling experience was on the iQFoil 85 Junior/Youth board. I started to get used to it within 15min sailing time. Equipment is easy to handle. As soon as you build some speed you get on the foil. Landings from foiling was soft, I wasn't scared or worried to hurt myself. So I kept trying! Great equipment to learn foiling.

- ABDULMAJEED AL HADRAMI -
 Athlete (Sailed Techno293, RSX)

“

I am very happy to be one of the first riders on IQfoil 85 Junior/Youth. The board has a perfect shape and the planning surface is wide, easy to go upwind or downwind. The foil is easy to take off and keep stability on the water, and it is easy to keep foiling when doing gybe. Besides, the rig is light-weighted and easy to control. I hope IQfoil 85 Junior/Youth will become official.

- CHUI WING CHUN-
 HKG 20
 47kg, born in 2004 Hong Kong

“

The design of the board is perfect with a higher volume, so it fits for most of the junior and Youth windsurfers. The board is very stable, and it is easy to control when foiling. Also, the rig is more light than others, so it is controllable for foiling. I hope IQFoil 85 Junior/Youth becomes universal.
