## NEEDLE GUIDE

### Needle Anatomy

**Butt:** The beveled end allows easy insertion in the needle bar.

**Shank:** Household needles have a flat shank, while commercial and industrial needles have round, threaded, notched or other special shanks. Shanks allow perfect positioning of the needle in the sewing machine needle bar.

**Shoulder:** The sloping area transitioning between the shank and blade. Schmetz color codes appear on the shoulder.

**Blade:** Needle size is determined by the blade diameter (i.e., size 75 is .75mm)

**Groove:** The groove cradles and guides thread to the eye. The length and size of the groove vary according to needle type.

**Scarf:** The indentation above the eye that allows the bobbin hook to smoothly grab the thread under the throat plate to create a stitch. The shape and size of the scarf vary according to needle type.

**Eye:** The hole through which thread passes. The shape and size of the eye vary according to needle type.

**Point and Tip:** Length, shape and size vary according to needle types.

### Change Your Needle

Damaged or worn needles result in:

- Broken or shredded threads
- Skipped stitches
- Puckered fabrics
- Damaged fabrics
- Uneven threads

### Replace Your Needle

It's the easiest way to improve your stitch quality.

### Needle Selection

Choose needle size according to thickness of your thread and needle type according to your fabric application.

### 130/705 H

Household sewing machines require a needle with a flattened shank. All needles in this system have a flattened shank for perfect needle positioning in the needle bar in relation to the hook.
