

How to correct the "Class Not Registered" error message when running a report on Windows Vista, Windows 7 and Windows 8:

TRS's HTML report viewer/editor will not work on Windows Vista, Windows 7 or Windows 8 unless the DHTML editing Control is installed. It can be found on the TRS10 or TRS11 installation CD.

Insert the installation CD into your computer. When the main install window comes up, click the "Install DHTML Editing Control (Vista Only)" button to install it. Even though it says (Vista Only) it still applies to Windows 7 and 8 (the installer was written prior to the release of Windows 7).
