

Recently Qwest started blocking port 25 which is used for outbound email. The new port number to use is 587. To change this in the JMM EMailer, start the emailer and then click on Settings and then click on Preferences. Next down near the lower right hand corner of the window click on Advanced Settings. Where it says Use this Port for outgoing Emails put 587 in the box. Click OK then exit the emailer, exiting is important so that it reads the new settings when it starts again. Start the emailer and try again. It should work now.
