

You receive Error 13 'type mismatch' when sending emails.

If you receive the Error 13 'type mismatch' error, it may be that your ISP's SMTP server requires a separate connection for each email sent. To make the JMM EMailer do that, do the following:

- 1) Go into the JMM EMailer and click on Settings and then Preferences.
- 2) Where it says Reconnect every [blank] messages type in 1.
- 3) Click on OK.
- 4) Try sending your emails again.
