

This article will discuss the ramifications of deleting inventory items from POS Products. It will also describe the settings to prevent items from appearing on reorder reports if you do not want to delete them from your inventory.

Inventory items may be deleted from POS Products. It will not affect the sales history for customers who have purchased the product.

TRS10:

Deleting an item from POS Products affects the Replacement Cost column on the Profit by Department report. The replacement cost (what it would cost to purchase it again from the vendor) will no longer be available. So, if you delete an item and run a Profit by Department report for a date range where the deleted item was sold, the report will be accurate in all columns except Replacement Cost.

If you want to keep the item in your POS Products inventory, you can prevent the product from showing up on reorder reports in the future by changing the Warning Level field to blank or -1.

TRS11:

The Replacement Cost column has been removed from the Profit by Department report, so deleting an inventory item no longer impacts this report.
