

Design Database Transfer Software 1.2.0

August 2024

This software can be used not only when newly installing Design Database Transfer into your PC, but also when updating Design Database Transfer installed on your PC to the latest version.

How to install Design Database Transfer 1.2.0 into your PC

1. Download the installer file.
Download FILE: ddt120_tac.exe (File size 18.1 MB)
2. Double-click the downloaded file "ddt120_tac.exe" on the File Explore.
3. The User Account Control dialog box appears. Click [Yes].
4. The Setup Language dialog box appears. Select the desired language, and then click [OK].
5. The setup wizard starts up, and the first dialog box appears.
6. Follow the installation screen directions to install the software.

Version 1.2.0 update will provide the following changes:

- Now able to use embroidery data saved as PES v. 11.4 files.
 - Available only on compatible machines.
- Expanded PHX data compatibility.

Update History

➤ Version 1.1.0 update provided the following changes.

- The message "Some data is larger than the maximum sewing area of the selected sewing machine, so cannot be transferred." will be displayed if the writing list contains data larger than the maximum sewing area of the destination machine and you press the transfer button. When this message is displayed, check whether the sewing area of each embroidery data in the writing list exceeds the maximum sewing area of the sewing machine. Remove all the data that exceeds the maximum sewing area of the machine from the writing list and press the transfer button.
- Improved the application function when transferring embroidery data with a design size of 360 x 360 mm / 14" x 14" (Jumbo frame) to a machine from the application via the wireless network.
- Revised the built-in instruction manual. (French version)
