

Determine the finished needlepoint belt size/length

Measure a belt currently worn (by the recipient of the new needlepoint belt, of course) from the tip of the belt buckle prong to the most used/ best fitting hole. This measurement is the finished belt size length.

Choose a buckle style & color

Brass finish- Available in gold or silver (most common choice)

Regular finish - Available in gold or silver

Note: Belts finished with regular buckles do not include leather "keeper".

IMPORTANT: Stitching Turn Rows

- Our belt finisher requires three (3) turn rows on 18 mesh, two (2) rows on 14 mesh (please stitch required number of turn rows above and below the design).
- Turn rows are additional rows stitched on the top and bottom of a needlepoint belt which are "rolled" under/to back during finishing.
- These additional stitched rows are necessary for a finished "look" and belt durability. (Binding stitch is NOT suggested)
