

Determine the finished needlepoint belt size/length

Measure a belt currently worn (by the recipient of the new needlepoint belt, of course) from the tip of the belt buckle prong to the most used/ best fitting hole. This measurement is the finished belt size length.

Choose a buckle style & color

IMPORTANT: Stitching Turn Rows

- Our belt finisher requires two (2) turn rows on 18 Mesh, one (1) row on 13 Mesh (Please stitch required number of rows above and below the design.)
- Turn rows are additional rows stitched on the top and bottom of a needlepoint belt which are "rolled" under/to back during finishing.
- These additional rows are necessary for a finished "look" and belt durability. (Binding stitch is NOT suggested.)

Finished size : _____ (inches)

Please refer to the diagram above & call with any questions 313-882-9110

Buckle color (please circle one): Brass OR Silver

Subtract 6 inches from the finished size = _____ (stitch this many inches of canvas)

(Example: if a belt is 36" finished size then you should stitch 30" of canvas.)
