

Stitching Warriors!

In lieu of using elastic as ear loops for the fabric mask,...

Many of the health care workers are suggesting adding fabric ties .

Ties allow the wearer to adjust the "snugness"

The length of the ties should be appx 16" long each. One tie at the each of the four corners of the mask.

Here is a simple way to do this:

~Cut strips of fabric about 1.5" X width of fabric.

~Press in half the length of the strip - wrong sides together to crease - open - then fold each raw edge to center crease.

~Now fold the entire length in half to enclose raw edges.

~Topstitch down the entire length along both sides close to the edge to seal the raw edges. (before you get to the end turn up and fold in the raw end.) Stitch across.

These will be washed n hot water and need to not have any raw edges that will Fray!

Thanks for sewing mask!!

Best to you all
