

Any pieces without Peltex or Pellon attached will be interfaced with SF101 (non- woven). No interfacing will be needed on the mesh trim pieces or bag binding.

I use cotton webbing 1 1/2" wide, but you can make fabric handles if you prefer as long as you have 84".

All pieces should be cut out and interfaced as listed before coming to class. There are a lot of pieces to be prepped and you won't be able to finish the bag in class if you don't have them all prepared.

A Teflon foot and a zipper foot are helpful. You will need straight pins even if you have wonder clips. Bring extra needles, you will be going over some thick areas and breakage happens.

If you have any questions, you can always contact me at any of the following:
