

Important – Read before using.

Mondo Bag Interfacing Panels REVISED!

Our popular Mondo Bag interfacing panels have been REVISED:

- 1) Now, easier use of 5” squares.
- 2) Lining can be made exactly as bag (no mirror-imaging).

What is the difference in the original and revised interfacing panel?

The difference between the original and updated interfacing is:

- 1) Additional verbiage at the top of the updated interfacing:
“Use (192) 2.5” squares OR (48) 5” squares.”

- 2) There are 12 rows on the updated interfacing and 13 rows on the original.

Do not mix the revised and original interfacing together in the same bag – the revised and original panels will not work together!

Will the original instructions work with the revised interfacing panels?

Yes, the difference being:

- 1) The number of 2.5” fabric squares required are 192 (original was 208).
- 2) The lining does not need to be mirror-imaged.

NOTE: The Revised instructions do not work well with the original interfacing!
