

Wheelchair Bag

Step 1. Cut a piece of fabric for the straps 4" x 14". If you have a very lightweight fabric, you can double it or use press on interfacing to back it.

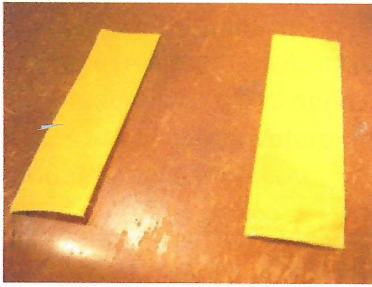

Step 2. Cut two coordinating rectangles approximately 12" to 15" by 15" to 18". This is very loose; you can vary the size of them. Pin those together on the bottom and halfway up the sides.

Step 3. Press the 4 inch rectangle in half lengthwise with wrong sides together and sew around raw edges, then zigzag the edge. If the fabric frays badly, you can go over it again.

Step 4. Cut this strip in half.

Step 5. Open the rectangles up halfway down and pin the strips in between them with the raw edges toward the outside.

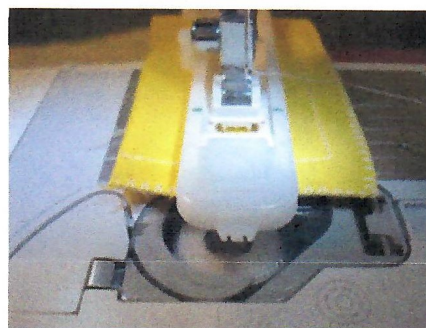

Step 6. Sew around the large rectangles leaving an opening for turning. I indicated in the picture where I leave my opening with the thimbles. Clip the corners on an angle.

Step 7. Turn and press. Are you seeing where an assembly line would be practical? One trip to the iron with all of them.? After you press all the edges out, I turn it up to where I want it and give it a quick press there also.

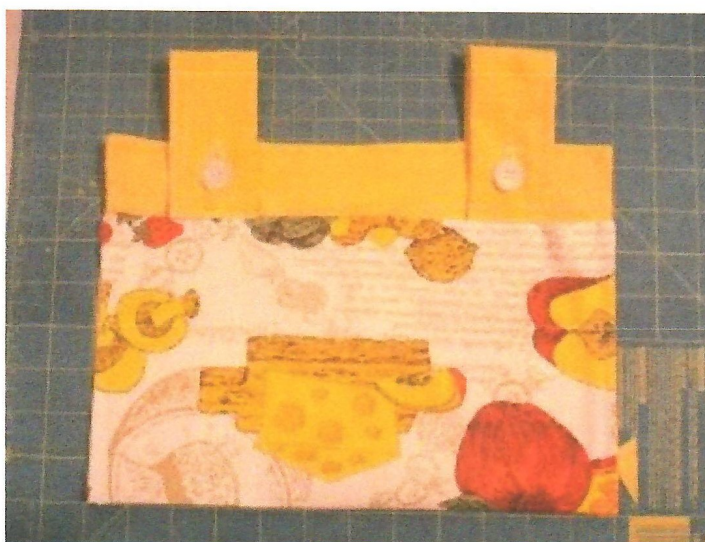

Step 8. Sew around the three sides. Starting at the bottom, sew along the side, across the top where the straps are and down the other side. Sew a line up through somewhere on the bag to make two pockets. If you have a larger bag, you might want to make three pockets in it. Be careful where you place the line so it does not bisect where the buttons are going to be.

Step 9. Buttonholes. My machine makes the greatest keyhole buttonholes, but I realize that buttonholes can be a real challenge to some because they used to be for me. You could use Velcro or heavy duty snaps if that would be easier for you

Step 10. Then sew the buttons on! And that is it. They are so easy!
