Directions for Triangle Treats

I used Epson Premium Presentation Paper Matte for these projects, but a cardstock paper, or matte photo paper, will also give good printing results and a sturdy pouch.

1. Cut out each rectangle, and crease at each line. The arrows indicate the location of each of the lines. Do not fold all the way down the length of the rectangle, only the length of the line itself.
2. Apply two-sided tape where shown, leaving the paper on one side of the tape.
3. Bring the left and right edges together. Peel paper off tape, and join the two edges together.
4. Pinch the bottom edge of the pouch together so that the side seam (the one you just made in step 3) is centered in the back, and flatten the bottom edge. Peel the paper off the tape, and adhere the bottom edges of the pouch. If desired, use a crimper to crimp the edge, or pinking shears for a decorative edge.
5. Fill the pouch with candy. Flatten the top edge, so that the middle crease line is at the front of the pouch. Peel the paper off the tape, and adhere the top edges of the pouch. Use a crimper or pinking shears along the edge, if desired.

*Note: The “Tear Here” marks are the instructions for breaking open the assembled triangle treat pouches to enjoy the goodies inside!
Directions for Candy Bar Wraps

These were designed to fit a Hershey’s® Milk Chocolate bar. I used Epson Presentation Paper Matte (a little lighter weight than Premium Presentation Paper Matte) for these projects, but any photo paper or cardstock paper will also give good printing results, and a sturdy wrap.

1. Cut out the candy wrapper. Crease at the four lines located along the right and left edges. Do not fold all the way down the width of the wrapper, only the length of the line itself.
2. Apply 2-sided tape along the bottom edge, and the right and left edges, as indicated below.
3. Peel the paper off each piece of tape. Turn the wrapper over to the blank side, and center the candy bar between the creased lines. Wrap the candy bar, overlapping the top edge over the bottom edge, with that seam in the center of the back of the candy bar. Press to adhere.
4. Pinch the right side opening together, and press the opening closed. Repeat on the left side. Use a crimper to crimp both edges, if desired.
